FUND COMMENT:
 July saw the strategy outperform its benchmark, returning 2.86% against the benchmark's 0.21%. The strategy has underperformed its benchmark since inception with a total return of 14.66% against the benchmark's 27.21%.

In terms of individual fund performance against the benchmark, both the underlying funds managed to outperform the benchmark during July. The Investec GI Div Growth Fund was the better performing fund, returning 5.47%.

The overall risk of the portfolio is low relative to that of the MSCI World Equity Index and the correlations of the underlying funds are very low, adding to the diversification within the strategy.

unit trusts are medium to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Unit trust prices are calculated on a net asset value basis, which is the total value of an assets in the portfolio including any income accrual and less any permissible deductions from the portfolio. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commission is available from the management company / scheme. Different classes of units apply to this fund and are subject to different fees and charges. Commission and incentives may be paid and if so, would be included in the overall costs. It should also be noted that as a result of the nature of wrap fund portfolios, an investor's underlying portfolio holdings and/or portfolio performance may differ slightly from the information reflected above. Therefore, performance figures presented on the fact sheet are approximate figures and may differ from actual performances of client accounts.
